

ABBYY® Mobile Web Capture

Transforming Mobile Customer Experiences

Organizations are struggling to engage customers with complex customer sign-up processes and facing high customer drop-out rates due to lengthy and inconvenient account sign-up. ABBYY Mobile Web Capture is a JavaScript based software development kit that can be embedded into your on-boarding processes to automatically capture any document using a mobile camera within a webpage. Just point your device's camera at a document and Mobile Web Capture does all the work – no clicks or adjustments required.

Key Benefits

Enhance the customer experience

Improve customer interactions by minimizing the effort required to manually capture and deliver data to on-boarding processes.

Eliminate custom development

Easily integrate a pre-built, comprehensive, web-based capture solution, reducing mobile application development resources.

Speed the capture of customer information

Automatically capture identification or other relevant documents accurately during the account-sign up process within the customer onboarding journey.

Gain a competitive advantage

Provide your customers with a seamless customer experience within their onboarding journey while saving development resources, giving you a leg up on the competition.

Key Features

Automatic image capture

Mobile Web Capture allows your customers to automatically capture images of documents using their mobile device to complete transactions using their mobile web browser without the need to physically snap a picture.

Automatic document detection

Because of the intuitive capabilities built into Mobile Web Capture, the software automatically detects the ideal time to capture an image best suitable for OCR.

Automatic pre-processing

Mobile Web Capture optimizes image quality by automatically detecting boundaries, cropping the document, correcting its perspective.

Enabling Content IQ

ABBYY Content IQ automatically makes customer information available to enterprise business systems faster in order to initiate support and complete transactions.

Frictionless processing

Capture customer documents from a mobile device with a browser and route accurate information to processes faster and cheaper without the need for human intervention.

Zero footprint architecture

Mobile Web Capture's browser-based capabilities utilize a zero-footprint architecture that eliminates the need for users to download special software to capture the image.

Process customization

ABBYY Mobile Web Capture allows for the development of custom solutions, support for specific business processes and easy integration into enterprise workflows.
